Issued by the Partit Laburista Communications Office

Partit Laburista continues to support innovation and investment in technology

A Partit Laburista delegation made up of Members of Parliament Alex Muscat and Fleur Abela visited this year's edition of TECHXPO 2026, being held at the MFCC in Ta' Qali. They were accompanied by Malta Digital Innovation Authority (MDIA) Chief Executive Officer Kenneth Brincat and Chairman Wayne Grixti.

During the visit, the delegation had the opportunity to explore first-hand various areas of technological innovation across the public, education and private sectors. The visit provided an insight into the potential of technology to further improve services, strengthen businesses and create new opportunities for the Maltese economy.

This year's edition carries added significance, following the launch of Malta's second National Artificial Intelligence Strategy by Minister for the Economy, Enterprise and Strategic Projects Silvio Schembri during the event's opening. The strategy sets out 86 measures for the 2026 - 2030 period, aimed at building on the progress already achieved and preparing Malta for the opportunities and challenges arising from technological advancement.

The Partit Laburista believes that technology and artificial intelligence should be among the key pillars of our country's future economic growth. Investment in these areas can increase the value generated by the economy, create quality jobs and open up new, high-skilled career opportunities for young people in Malta and Gozo.

This must go hand in hand with continued investment in education. It is essential that today's students, who will make up tomorrow's workforce, are equipped with the skills and knowledge needed to thrive in a rapidly evolving workplace shaped by technology and innovation. The work of a Labour Government is therefore reflected not only in the adoption of new technologies, but also in education, through specialised courses and the creation of opportunities that make a tangible difference in people's lives.

Alex Muscat said that technology can be applied across various fields to improve our quality of life, noting that Maltese companies are making significant advances by integrating these technologies into everyday life. Fleur Abela, meanwhile, highlighted how the ambition of Maltese companies is driving progress across a range of technological fields, with a positive impact on the country's economy.

Partit Laburista will continue to support initiatives that place Malta at the forefront of innovation and digital transformation, ensuring that the benefits of this progress are shared by everyone.
